

SharePoint & Office 365 Usage: An Industry Study

Presented by **Sharegate, Hyperfish & Nintex**

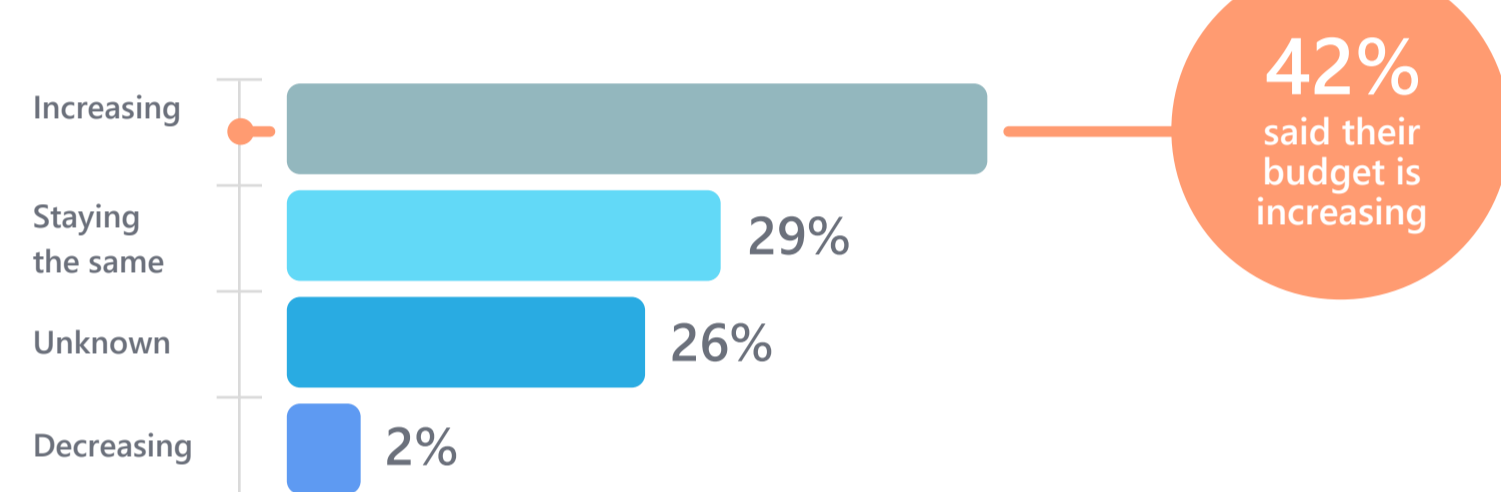

The Cloud vs. On-Premises: Office 365 Is on the Rise

On-Premises or Office 365? Cloud collaboration has clearly become more popular, 61% of the companies are running either full cloud or Hybrid SharePoint Environments, but there are still friction points keeping organizations from making the switch.

How SharePoint is Deployed in Organizations

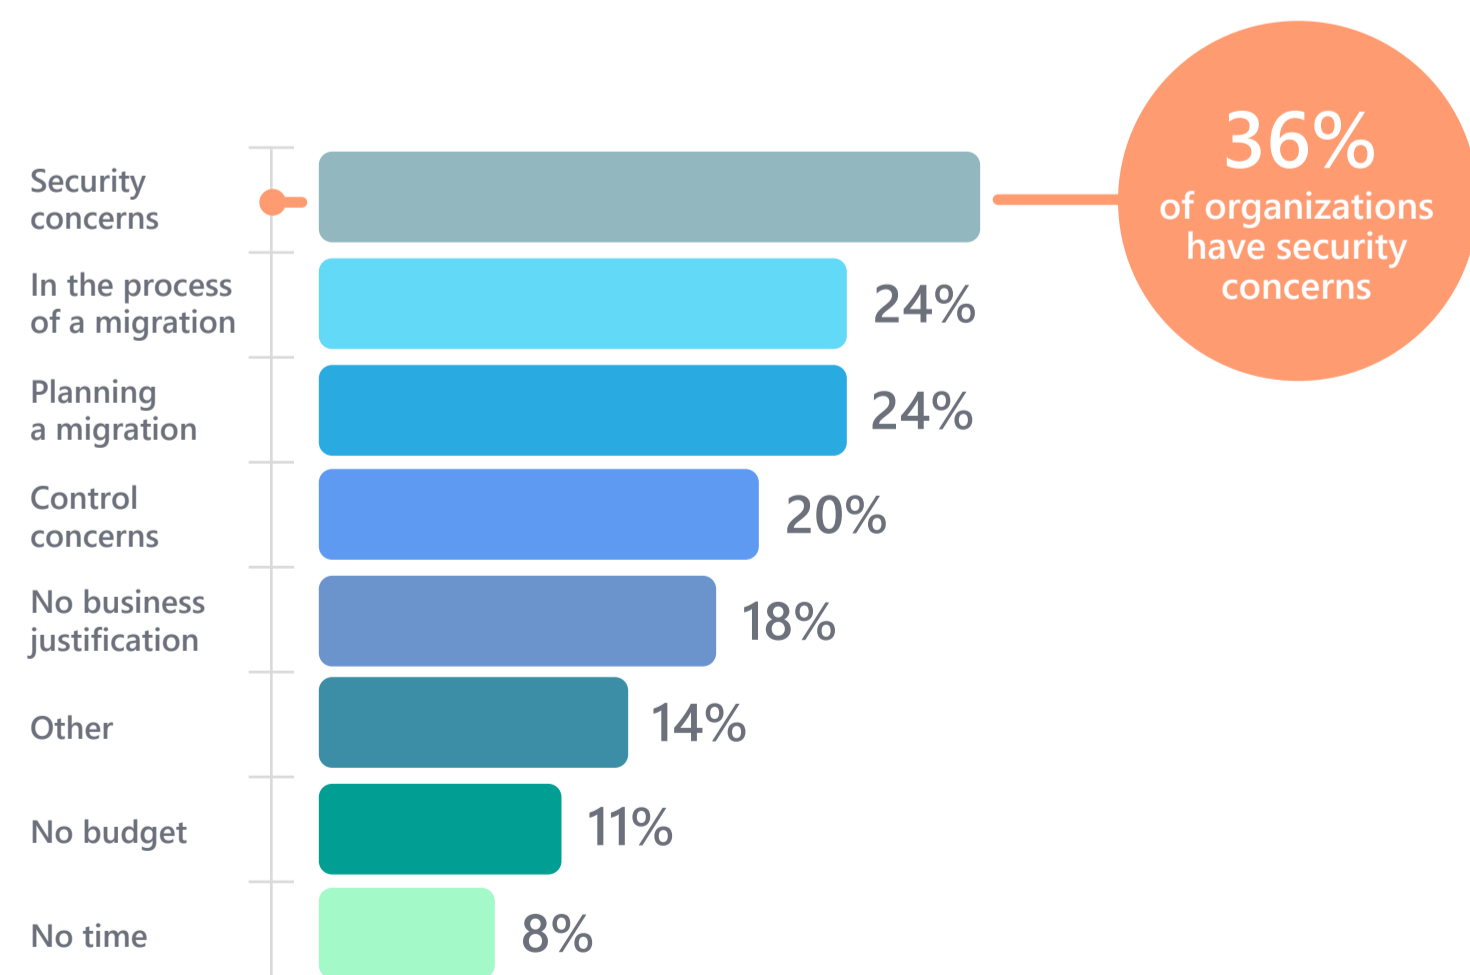

Annual Spend of Organizations on Office 365 and SharePoint

“ We’re really excited to see increasing customer investment in SharePoint and Office 365. It’s testament to the value of the platform and strength of the partner eco-system... ”

Brian Cook, CEO hyperfish

What Is Keeping Organizations From Moving Their On-Premises SharePoint to the Cloud?

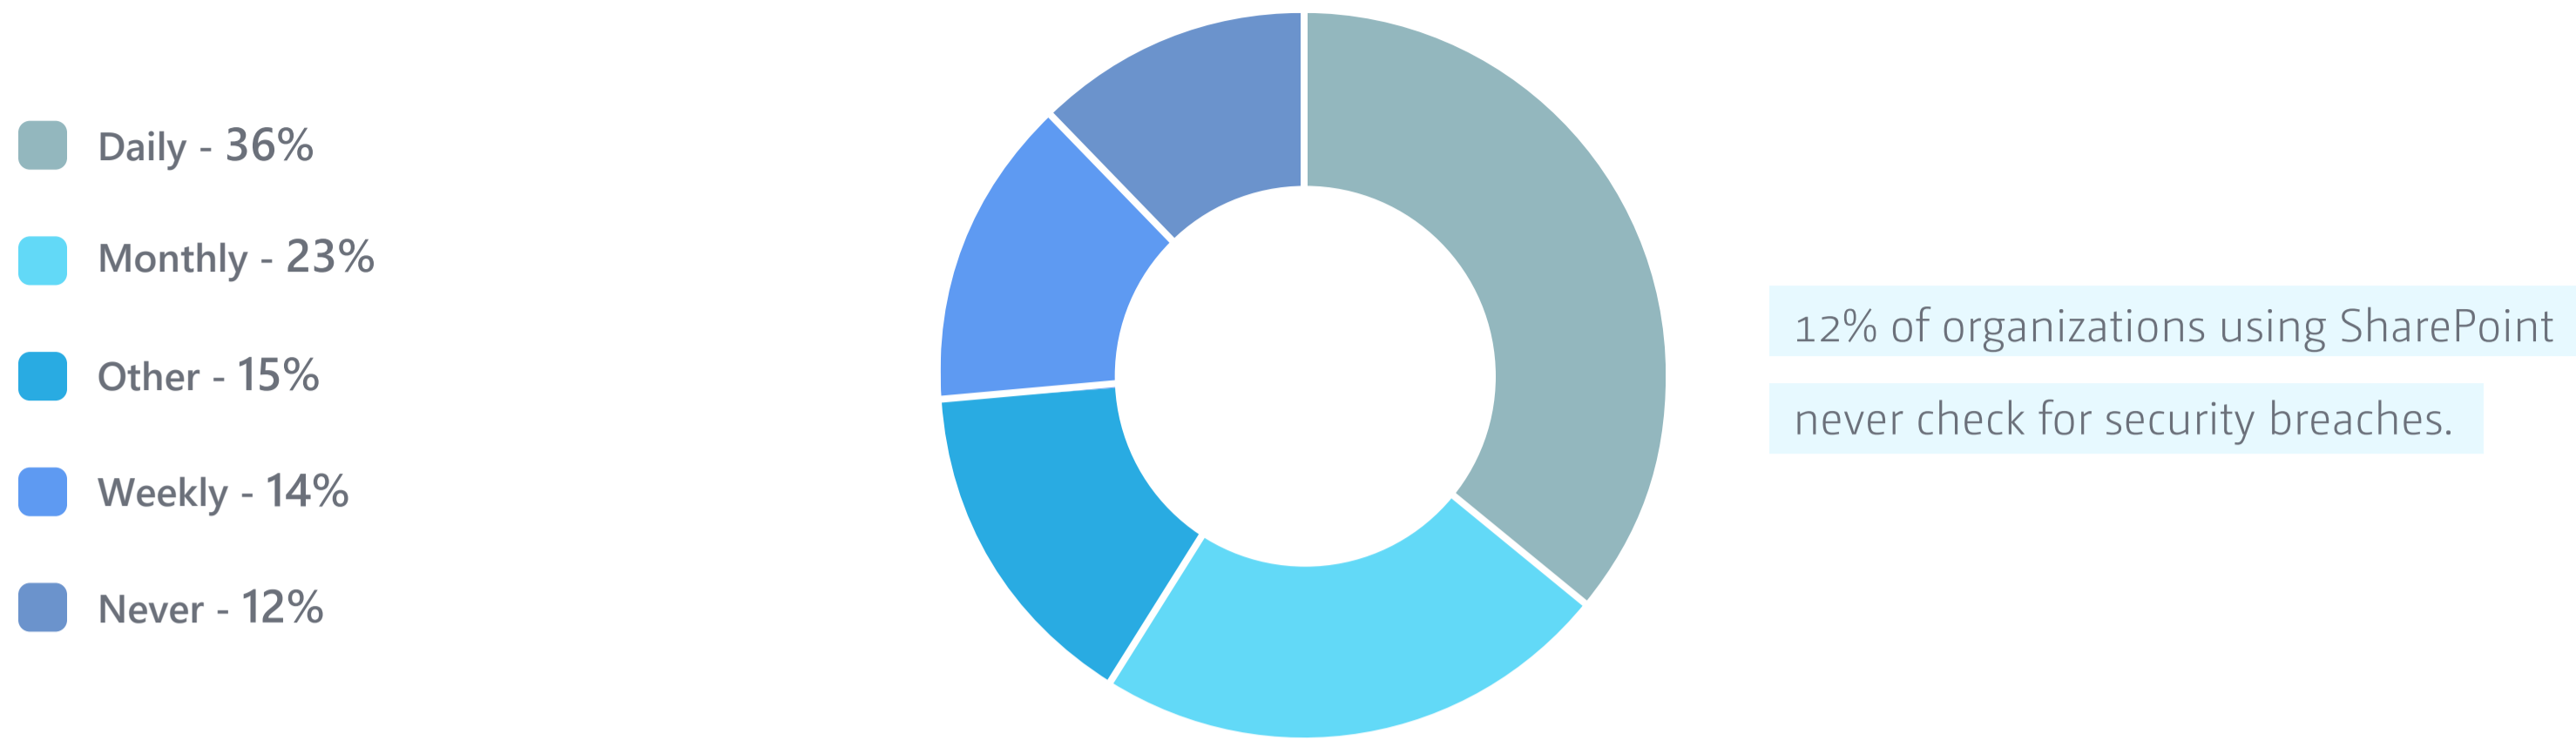

Despite the cloud’s popularity, It seems that SharePoint Online and Office 365 adoption is hindered most by security concerns.

“ It’s interesting to see that security is still a concern, considering they’re probably a lot more secure using Office 365 than staying with an On-Premises version. ”

Benjamin Niaulin, Product Evangelist Sharegate

Frequency of Potential Security Breach Checks by Organizations

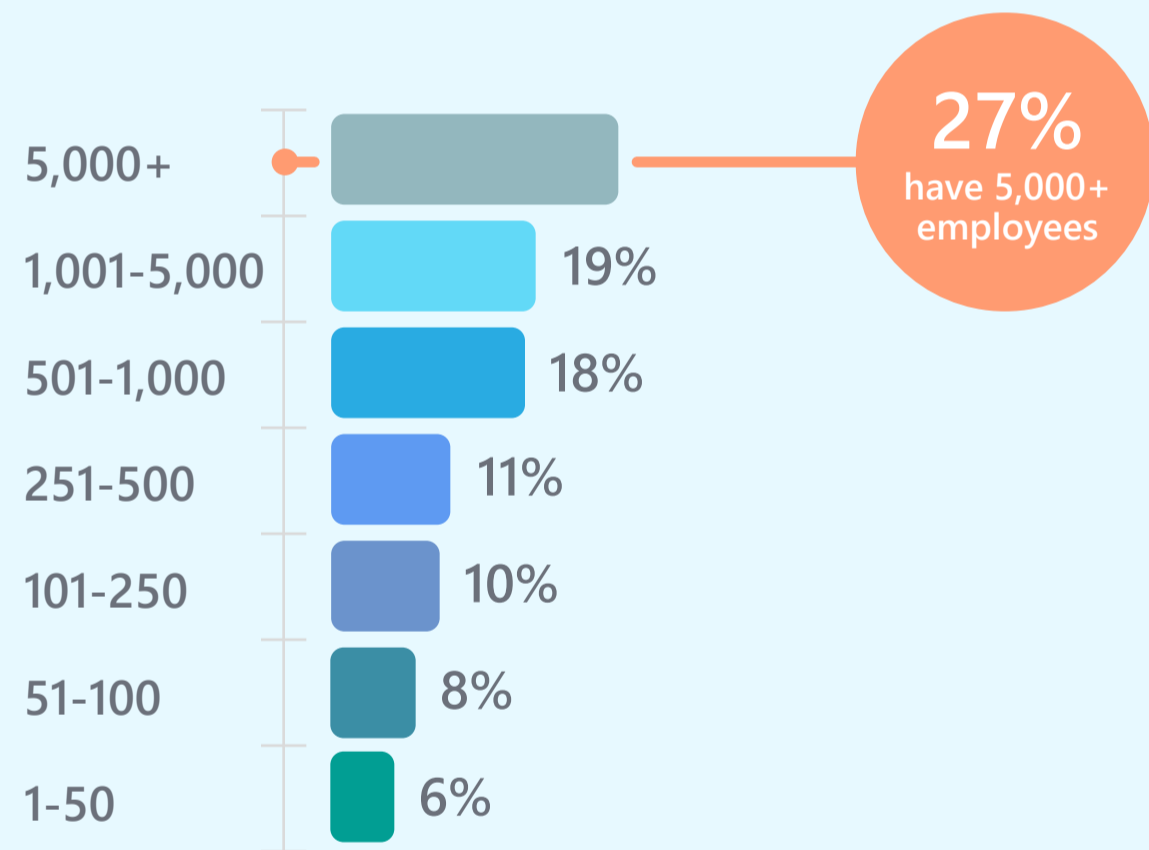

SharePoint: A Collaboration Tool for Businesses of Every Size

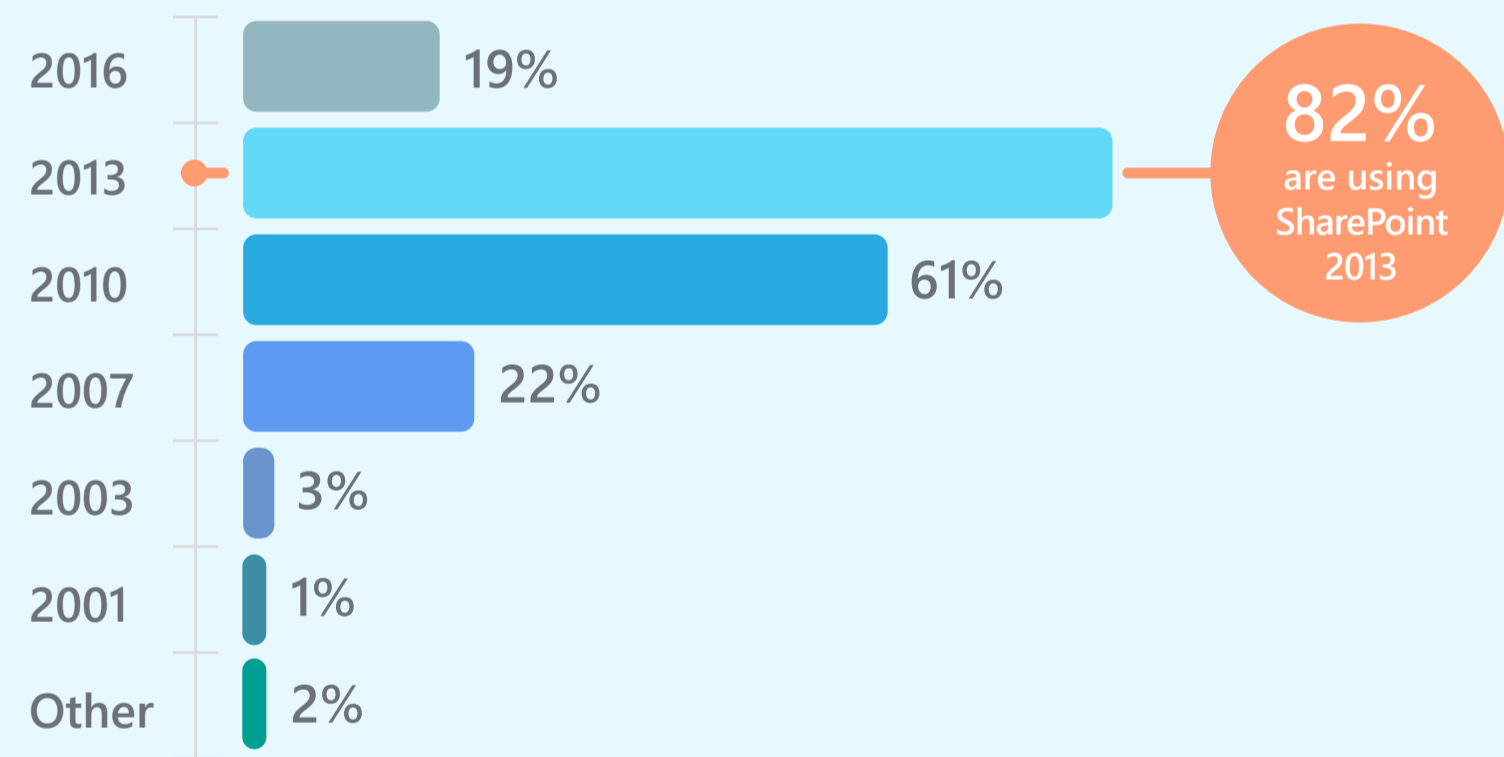

Who said SharePoint On-Premises was dead?

As of July 2016, 82% of surveyed organizations are using SharePoint 2013.

Size of Companies Using SharePoint

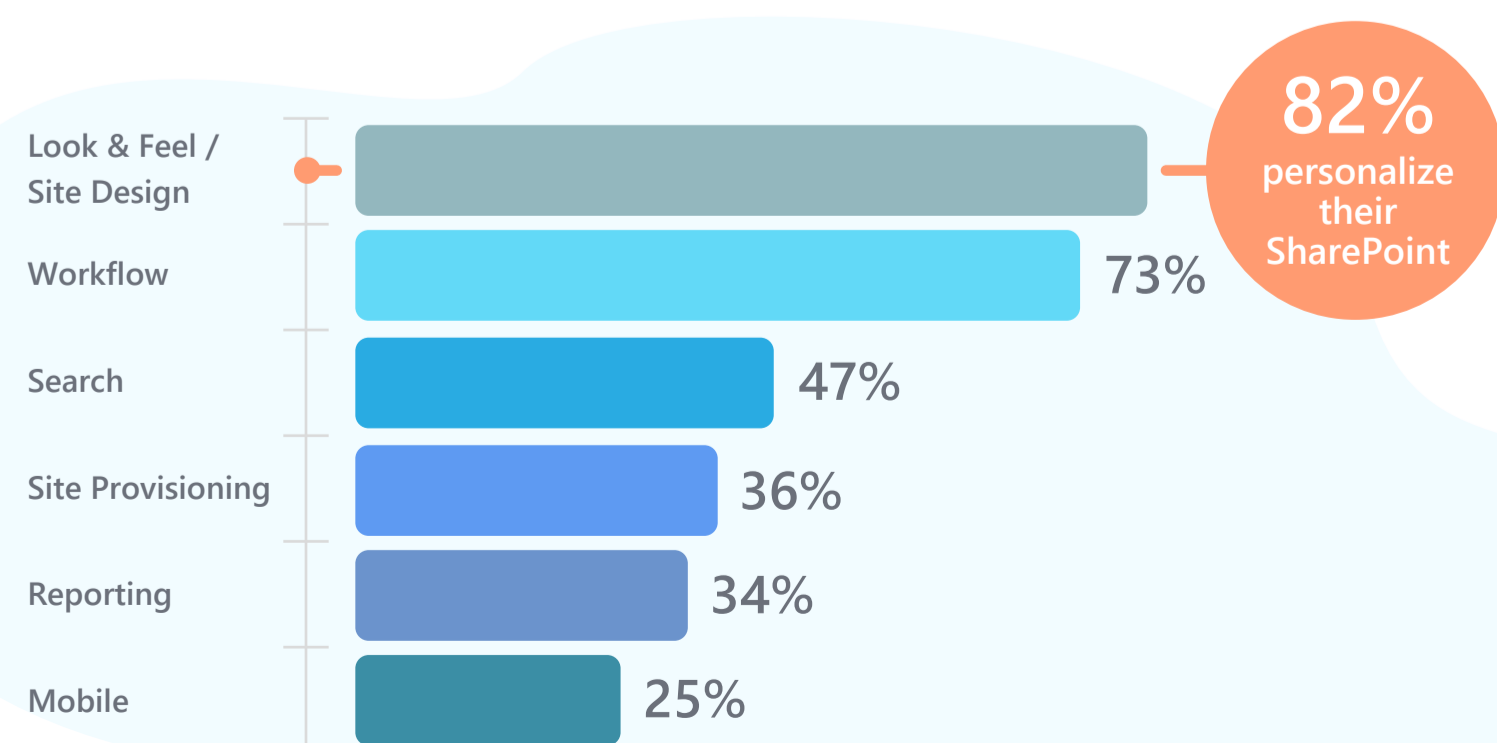

SharePoint Versions Deployed in Organizations

SharePoint Customization Reflects Focus on End User Experience

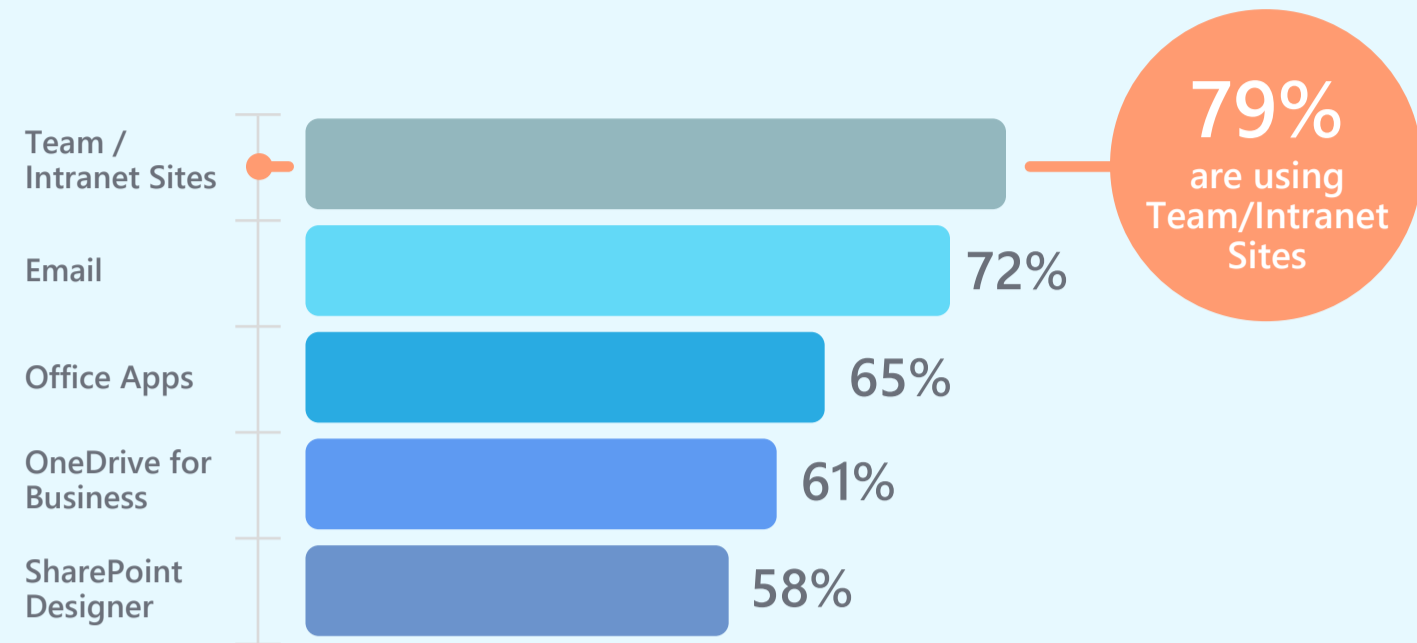

Main Customizations Implemented Within Organizations

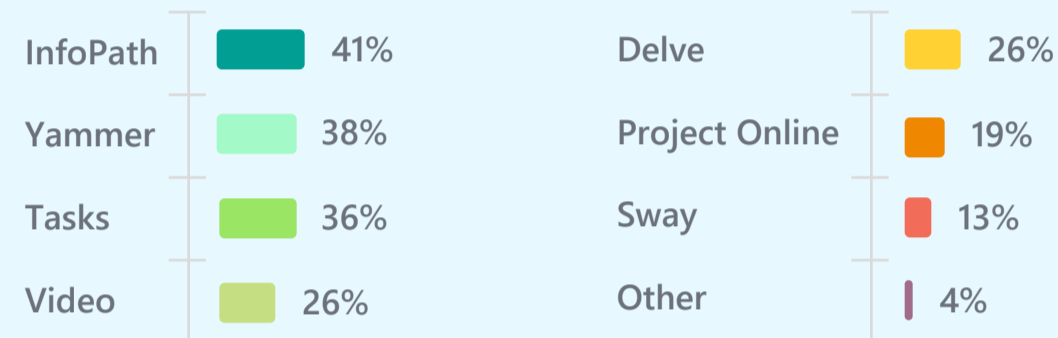

82% of surveyed organizations are personalizing their SharePoint environments. Proof that they understand the importance of effectively displaying their content to the end users!

SharePoint & Office 365 Workloads

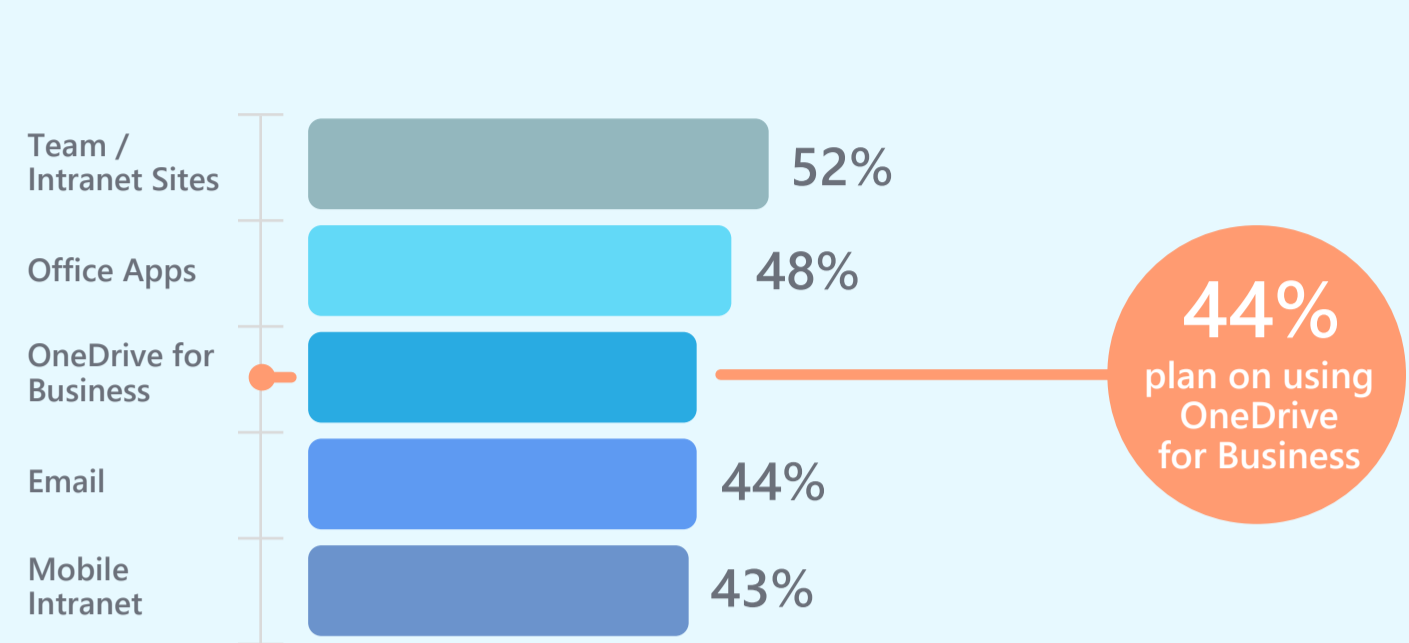

Workloads that Are Currently Being Used

Plans for Future Use of Workloads

Other Workloads

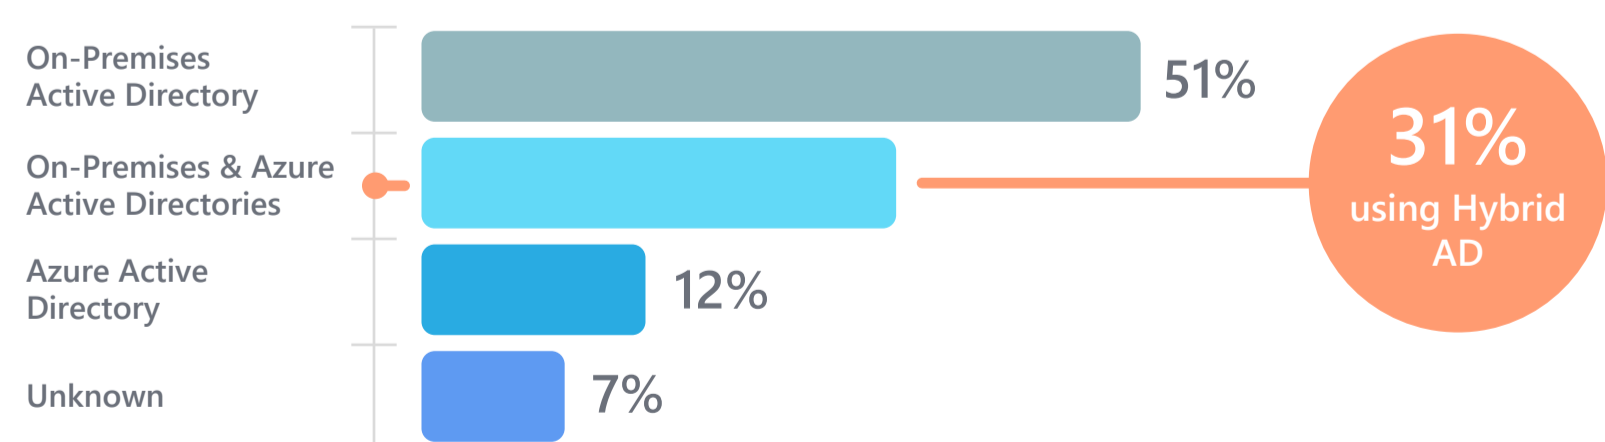

Team & Intranet sites seem to be used almost as much as email, which hints that SharePoint is really becoming an essential tool for businesses. Also, among one of the fastest growing workloads is OneDrive for Business. In fact, 44% of organizations plan on using OneDrive for Business in the future!

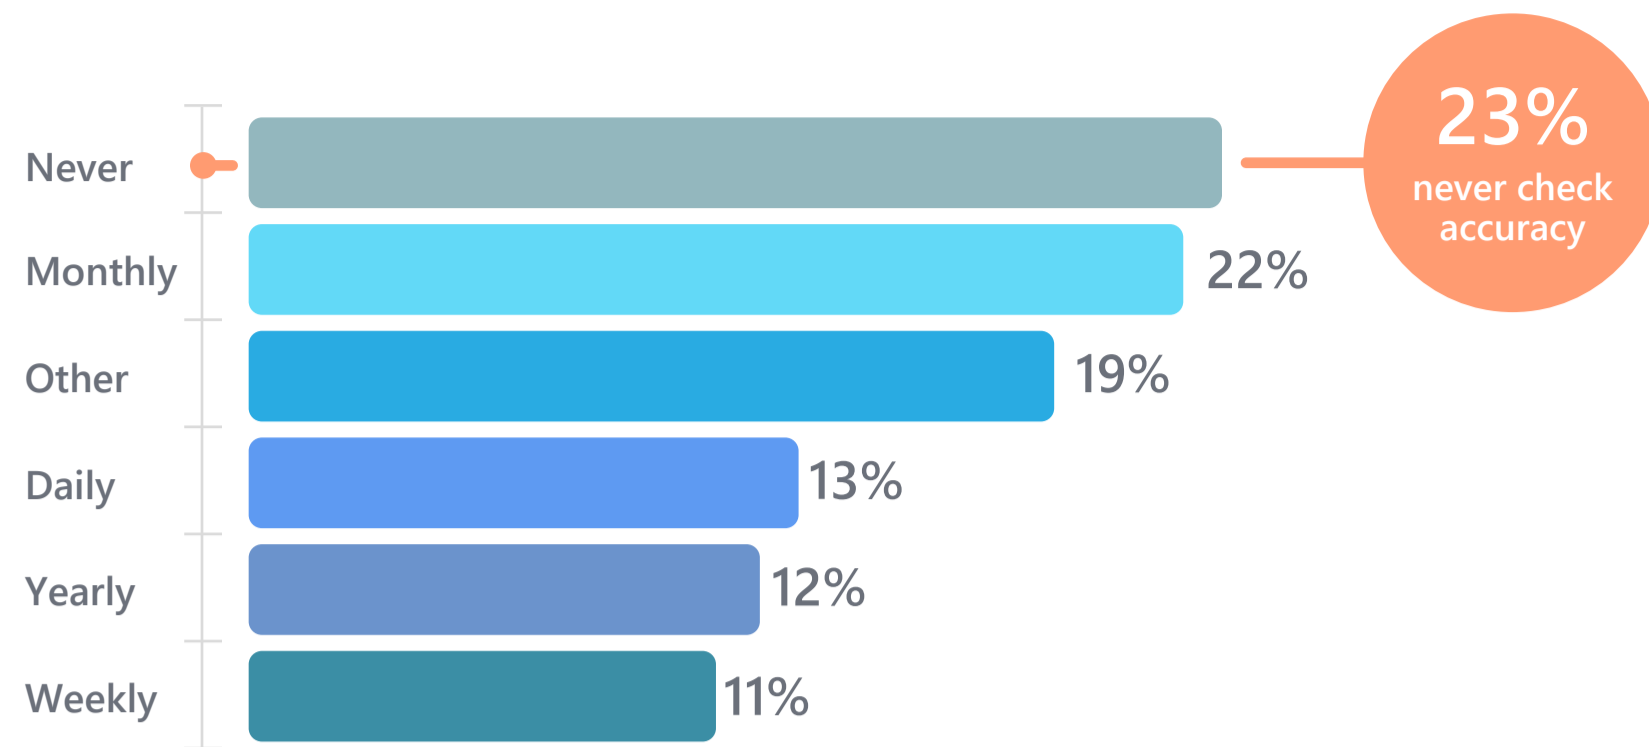

Active Directories : Hybrid, On-Premises or Azure?

With the rise of the cloud, it's not surprising that 31% of organizations are running Hybrid Active Directories.

Active Directories Being Run in Organizations

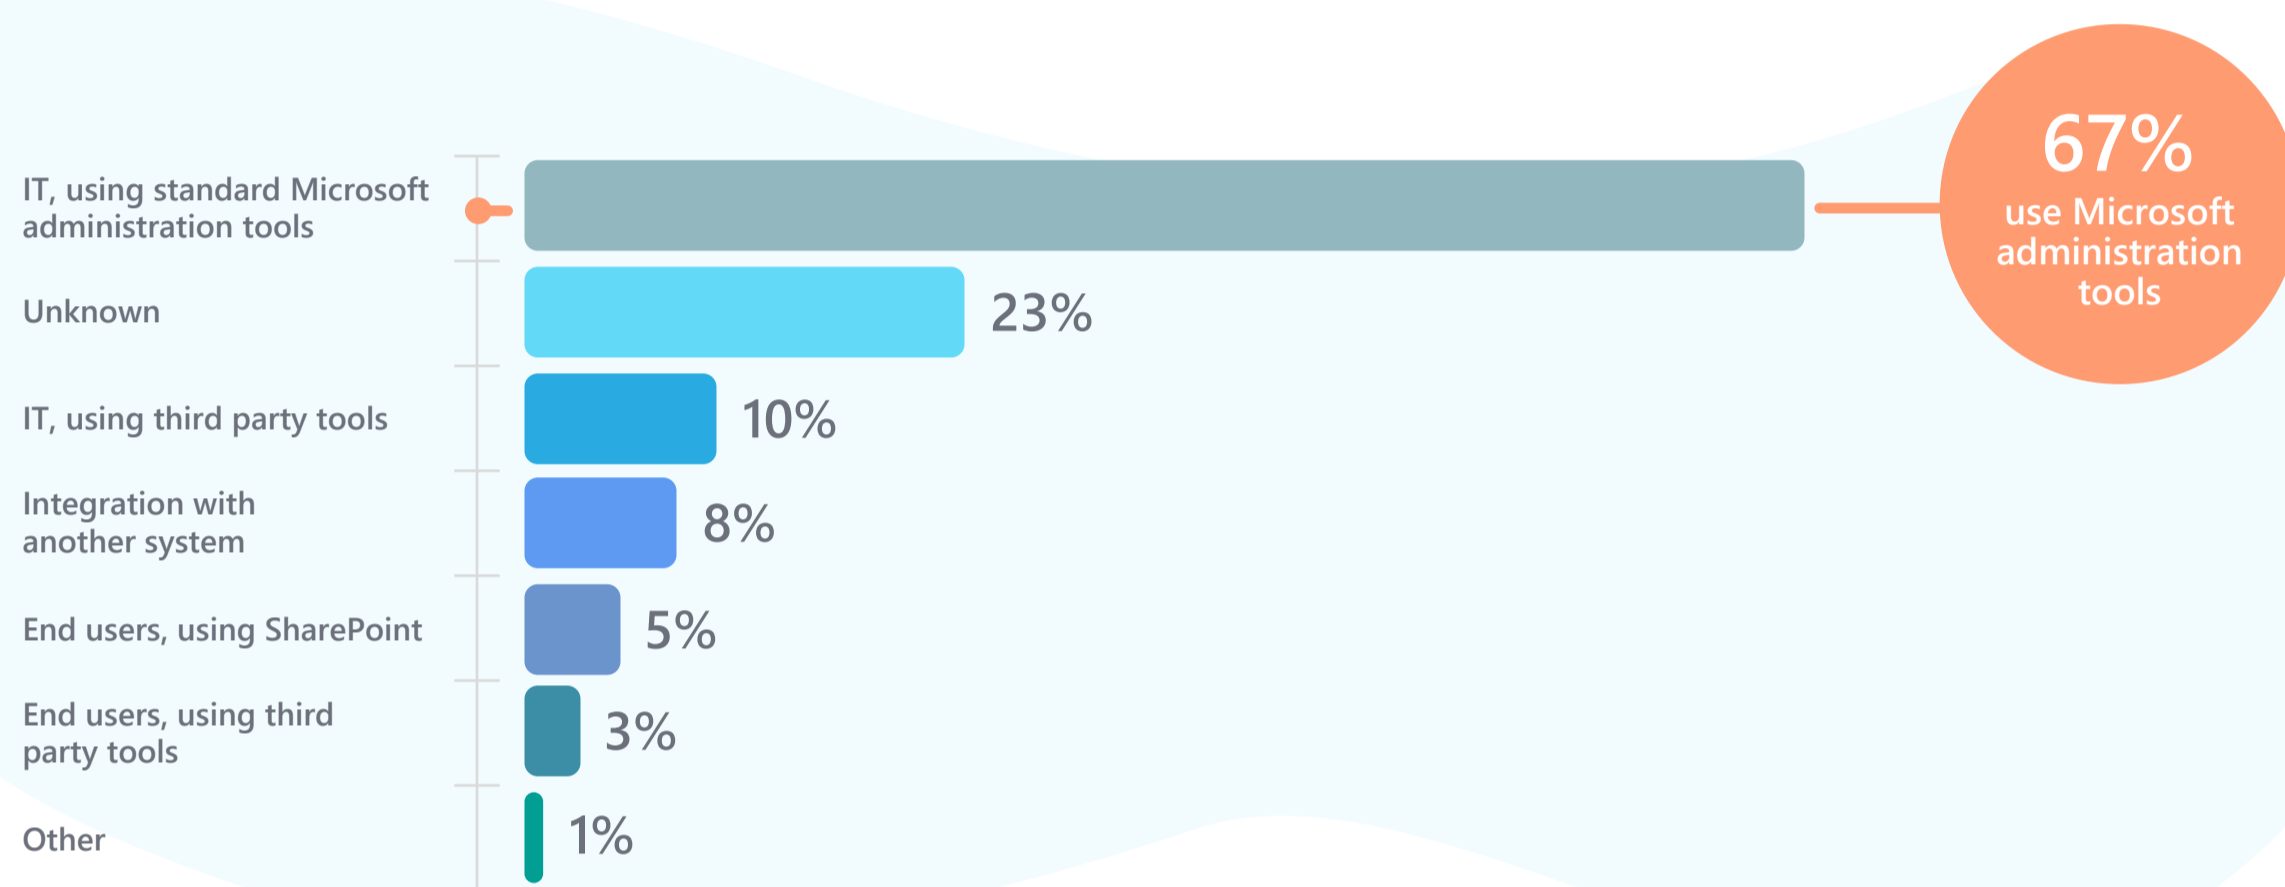

Frequency of Evaluations by Organizations for Accuracy and Completeness of User Profiles in Active Directories

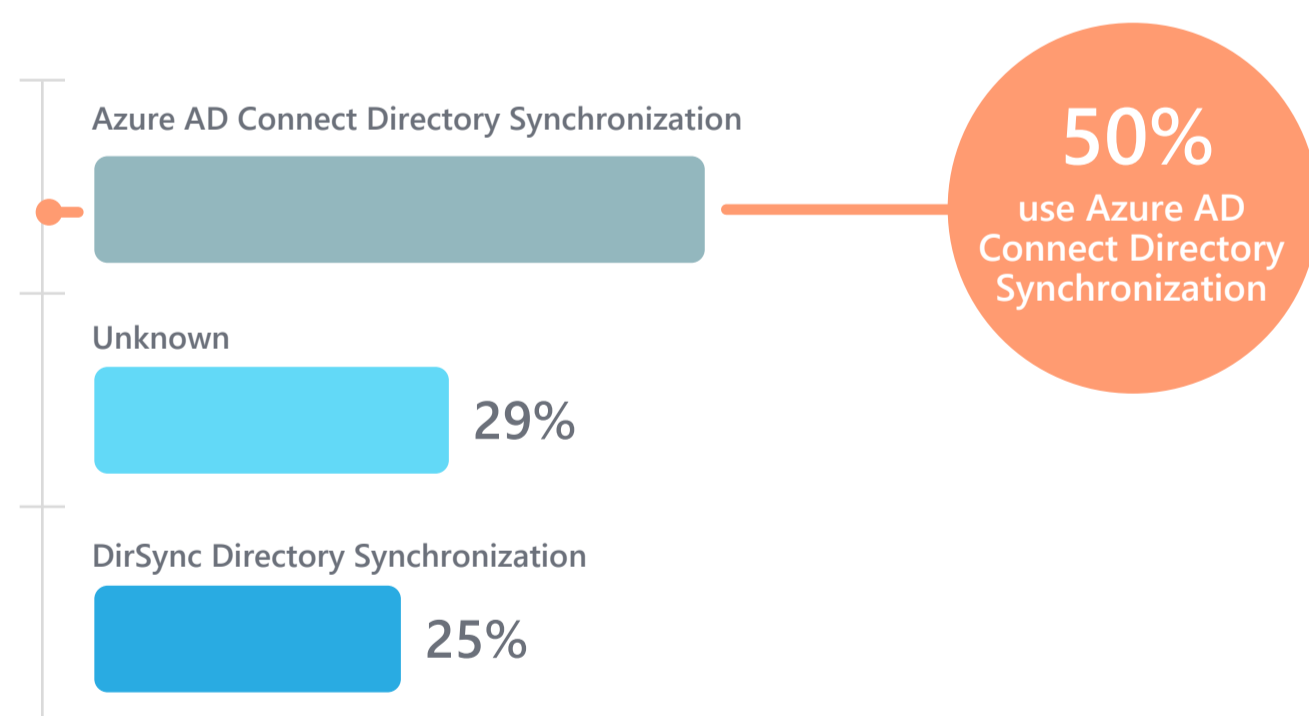

An interesting fact, 23% of organizations never evaluate the accuracy or completeness of user profiles within their Active Directories.

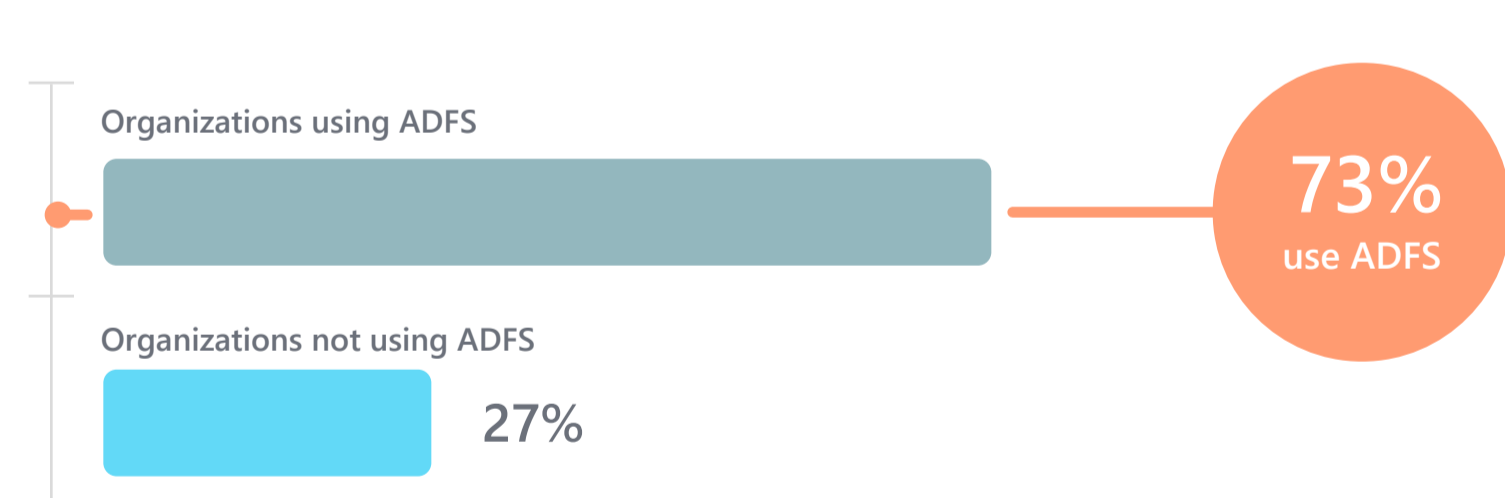

Updates to Active Directories in Organizations

Directory Synchronization Tools Used

Use of Active Directory Federation Services (ADFS)

“While Active Directory information is critical to the success of Office 365 and SharePoint deployments, most organisations are still manually maintaining the people information in their Directory”...

Chris Johnson, CTO hyperfish

Methodology and Participant Profile

A total of 495 randomly drawn IT Professionals and SharePoint Administrators were surveyed from the Hyperfish, Nintex and Sharegate client pool in order to gain insight into SharePoint and Office 365 usage and deployment worldwide.

A collaboration between:

Hyperfish enables organizations to automatically identify and populate missing information in directories, quickly and easily. Utilizing next generation technologies, Hyperfish automates the process of keeping directory content fresh and up-to-date.
